

InteliWISE Deployment Manual

How to publish the Virtual Agent

InteliWISE.com

Copyright 2011

There are three steps in order to set up the InteliWISE Virtual Agent on your website:

- 1. Get the embed code from InteliWISE**
- 2. Put the embed code into your website HTML code**
- 3. Publish the updated HTML on-line**

In order to place a Virtual Agent on your website, all you need to do is place a specific HTML Script tag in your website HTML code.

This is how the sample **Embed Code** looks like:

```
<script type="text/javascript"  
src="http://test.inteliwise.com/proxy/Inteliwise/SideTabAvatar/"></script>
```

The embed code should be placed in your website HTML code.

This is how the sample HTML code looks like:

...

```
<body>
```

```
<script type="text/javascript"
```

```
src="http://client.inteliwise.com/proxy/EcoSmarte/VirtualAgent/"></script>
```

...

3 | Publish the updated HTML on-line

After you publish the updated HTML code the Virtual Agent will show up on your website.
